

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

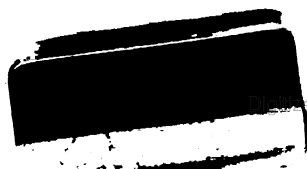

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

ANNUAL REPORT
OF THE
COMMISSIONER OF PATENTS
TO CONGRESS,
FOR THE YEAR ENDING DECEMBER 31, 1885.

Laid before the Senate by the President *pro tempore* February 15, 1886, ordered to lie on the table and be printed.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, January 30, 1886.

To the Senate and House of Representatives of the United States of America in Congress assembled:

Section 494 of the Revised Statutes makes it the duty of the Commissioner of Patents to "lay before Congress" an Annual Report, which shall exhibit, *first*, a detailed statement of all moneys received; *second*, a detailed statement of all expenditures for contingent and miscellaneous expenses; *third*, a list of all patents granted during the preceding year; *fourth*, a list of all patentees with their places of residence; *fifth*, a list of all patents which have been extended during the year; and, *lastly*, such other information of the condition of the Patent Office as may be useful to Congress or the public. Before proceeding with such detailed statements and lists, I desire, in pursuance of the last requirement above referred to, to call the attention of Congress to a few topics relating to the condition of this Office, which, in my judgment, materially affect its interest and prosperity.

ROOM.

My immediate predecessor in his last Annual Report called your attention to the fact of the "utter inadequacy of room and facilities for conducting the business of the Patent Office." The same difficulties which were then pointed out by him still exist. I need hardly advert to the fact that when this building was constructed it was not intended to be occupied by the several bureaus of the Department of the Interior. At the present time about one-half of the room in this building is occupied by the force of the Patent Office. It is not extravagant to assert that every room in the building could be advantageously used to-day by this Bureau. In the first place, each one of the twenty-eight examining divisions ought to have two separate rooms. The reason for this is manifest. The primary examiner is called upon frequently to consult with applicants and their counsel, and to listen to arguments more or less extended, which cannot be properly conducted in the same room where the work of examination is proceeding without seriously retarding such work.

By act of Congress, approved July 7, 1884, the Secretary of the Interior was authorized to rent buildings for the use of the Department. I respectfully suggest

that some provision should be made by the present Congress authorizing the rental of a building or buildings for the occupancy of one or more of the bureaus of the Department of the Interior, or some portions thereof, and thereby secure room which seems to be indispensable to the proper conduct of the business of this Office.

The same sanitary condition which was so graphically pointed out by my predecessor in his above-mentioned report still endangers the health of the employes of this office. I cannot refrain from urging upon Congress that it was never intended that this important Bureau, upon which so largely depend the material advancement and prosperity of the country, should be restricted in its facilities for doing business in order that a large sum might be added yearly to the net surplus in the Treasury of the United States standing to the credit of the Patent Office.

OFFICIAL GAZETTE.

On Tuesday of each week the patents are issued. On the same day this Office causes to be published an OFFICIAL GAZETTE, containing, among other things, a list of such patents, accompanied by a transcript of the claims and illustration of the invention, the names and residence of the patentees, a list of designs patented, trade-marks and labels registered, and decisions in patent causes. This publication has become an indispensable adjunct to this Office, and has taken the place of the old Patent Office Report.

On the 18th day of May, 1872, a statute was passed authorizing each Senator and Representative to designate eight public libraries to which the GAZETTE should be sent without charge, and fixing its subscription price at not less than five dollars per year. At that time it was less than one-half its present size and worth less than half its present value. Subsequent legislation leaves it at least very doubtful as to whether this law has not in effect been repealed. If it has been, then while the publication of the GAZETTE has been authorized in the several appropriation acts, its distribution has been for years past and is now without express authority of law. I have called attention to the probable repeal of this statute in order that Congress may take such action in relation to the distribution and price of the GAZETTE as, in their judgment, may seem proper.

In this connection I invite the attention of Congress

to the fact that there has never been any provision of law by which this Office has been able to secure the report of any court decision. I respectfully submit that some provision should be made by which each of the federal courts should be required to furnish immediately to the Patent Office a certified copy of any judgment, decree, decision, or opinion hereafter made or filed in any patent case. The publication in the GAZETTE of such decisions, in addition to the present contents, would, in my judgment, add materially to its value and circulation, and would tend much toward securing an intelligent and uniform practice in the Office.

PHOTOLITHOGRAPHY.

A very considerable portion of the amount of money which is appropriated year by year by Congress for the disbursements and expenses of the Patent Office is expended in securing a reproduction and illustration of each invention. At the present time the best known practical method of securing a comparatively cheap and absolutely accurate reproduction and illustration is by the art of photolithography. Formerly this result was accomplished by engraving, afterward by photography, and thereafter by the present system of photolithography, which has been built upon and added to little by little until the present high standard has been reached. Each succeeding year, as the law now stands, this work is let to contracting parties. For the purpose of preparing for this work of reproduction the original drawings are transmitted by the Office to the photolithographer. As soon as the proof-sheet is prepared by him it is returned to this Office, together with such original drawing, where a careful comparison is made by the employés of the Office, who are required to make personal inspection of such work. Imperfect proof-sheets must be returned and corrected *immediately*. It is of the utmost importance that this work should be done well and without delay. On Tuesday of each week every inventor in the country has the right to expect that the patent which is to issue to him will be signed and that the GAZETTE will be issued. In case a maximum issue is desired and prepared for by the Office, the contractor must see to it that there is no failure, and his force must be at all times adequate. For manifest reasons this work *must be done* in the city of Washington. It is not enough that the contracting parties should be responsible and solvent, but the work *must not* fail. While at the present time this important work is always faithfully, promptly, and efficiently performed, still under the present system in the hands of any contractor it is liable at any time in any year to fail. A recovery upon the contractor's bond of a sum of money for damages would be wholly inadequate. In my judgment, provision should be made by which the prompt and proper execution of this work should be absolutely secured, and I know of no way to accomplish such result unless the work be assumed and done by the Patent Office. At present the contractor is required to reproduce a large number of additional copies of each patent and illustration, which copies are kept on sale by this Office, and from which a substantial profit is derived. Should the Office assume and hereafter perform this work for itself, undoubtedly at the outset the expense would exceed somewhat the sum which is now paid to the contractor; but, on the other hand, absolute certainty of

the permanent, faithful, and proper execution of the work would be secured. I feel no doubt whatever that this important part of the daily and orderly business of this Bureau should become a part of it and be conducted and controlled entirely within this Office.

LABORATORY.

In connection with this subject I desire to call attention briefly to another imperative need of the Office. In view of the rapidly-advancing importance of all inventions pertaining to electricity, it seems absolutely indispensable that suitable provision should be made for the proper testing of apparatus relating to this branch of invention. For this purpose within the court of this building the necessary facilities could be provided. Several times since my incumbency of this Office I have felt compelled to permit, and have permitted, the examiner in charge of this class to leave his Office and go a long distance to witness experiments which could not, for want of room and apparatus, be attempted at home.

INCREASE OF FORCE.

There are no employés in the service of the Government who labor more faithfully and diligently than the examining force of this Office. It is well understood that the Patent Office has never been a burden upon the treasury of the Government. On the contrary, it pays a large excess year by year into the Treasury. The examining corps is wholly insufficient to perform the important duties devolving upon it. For manifest reasons, applications for inventions should be acted upon promptly, speedily, and intelligently. At the same time I cannot safely urge upon examiners the necessity of expedition. Nothing is easier than for an examiner to pass a case without critical examination. Almost daily I am constrained to urge upon the examiners the diligence and labor necessary to keep up as nearly as may be with the rapidly-accumulating work, and at the same time to see to it that no case passes their inspection without critical investigation. The Office needs an addition of two principal examiners, four first, eight second, eleven third, and fifteen fourth assistant examiners. The need of more help in this important work is imperative, and I urgently ask that it be furnished. I respectfully call attention to page 57 of the last printed report of the Secretary of the Interior upon this subject. This Office is also in need of a skilful officer to have charge of the reception of applications, and who might be called an "application clerk." Such clerk should be paid a salary of \$2,000. We also need an increase of two clerks of class three and one skilled stenographer at a salary of \$1,600 per annum. We also ought to have an increase of two clerks in class two. I think the good of the service further demands the employment of twenty-eight examiners' clerks at \$1,200 each, and of one messenger at \$840.

No provision of law is made for the employment of messengers in this Office. I respectfully ask that provision be made for the employment of twenty-five messenger-boys at a compensation of \$360 per year. Such boys would be very serviceable, and would relieve men receiving much larger salaries from all messenger and errand work, and, indeed, work which is frequently done by the examiners themselves.

INCREASE IN SALARIES.

Nearly forty years ago Congress established the salary of a primary examiner at \$2,500. (9 Statutes at Large,

231.) To-day his salary is one hundred dollars less. In 1855 the salaries of the assistant examiners were established as they at present exist. I regard these allowances as inadequate, and the practical result is that many of the most valuable examiners desert their employment every year to enter a more lucrative field. I respectfully recommend that the salary of the primary examiner be again restored to the annual compensation of \$2,500. I also call attention to the fact that the salary of the Assistant Commissioner, which at present is \$3,000 per year, is quite inadequate, and should be increased at least five hundred dollars. The general law also made provision that the salary of the Chief Clerk should be \$2,500. Only \$2,250 are appropriated yearly for this purpose. I recommend its re-establishment as it was originally. The law provides a salary of \$2,000 per annum for the Law Clerk of this Office. This compensation is too small, and I respectfully recommend that it be increased to \$2,500. The duties and responsibilities of the Financial Clerk of this Office are very great. His present compensation is \$2,000. In my judgment it should be increased five hundred dollars. I also recommend an increase of one hundred dollars per year in the salaries of the model attendants now receiving \$800.

I respectfully call attention to Appendix Q, page 271, of the "Estimates of the Appropriations, 1886-'87," where this subject is presented in a letter to the Secretary of the Interior.

With an ample force of reasonably well paid employes it would certainly follow that fewer errors would occur, much better work would result, important inventions would be acted upon and given to the country more speedily, and the usefulness as well as the revenues of the Office would be greatly enhanced, while many of the results which have brought more or less reproach upon the Patent Office could and would be avoided.

LEGISLATION.

The Revised Statutes, section 4885, in regard to the date which a patent shall bear, section 4887, in regard to its limitation, section 4898, relating to assignments of patents and the record thereof, and section 4936, relating to the reimbursement of persons who have through mistake paid money into the Treasury for fees accruing at this Office, I commend respectively to your careful consideration. Some or all of these sections should probably be carefully amended. Inasmuch, however, as I expect to be able to explain orally to the respective Committees on Patents my views upon these several statutes, I refrain from a further discussion of them here.

There is one other subject to which I wish to invite the especial attention of Congress. At the present time, in addition to his administrative duties, the Commissioner is called upon to hear all cases of appeal from the rejection of a patent by the Examiner-in-Chief, as well as to finally hear and determine all interference cases which may be appealed to him. Aside from the burden which this imposes upon the head of this Office there is a want of uniformity in the decisions which emanate from time to time from the respective Commissioners of Patents, which ought to be corrected. I know of no better way to correct this evil than the establishment of some tribunal, to consist of at least three judges, whose tenure of office shall be fixed, and to whom

all appeals shall lie. I have no doubt that the establishment of such a tribunal with such jurisdiction would not only make it possible for the Commissioner to conduct a more successful administration of his Office, but would secure to inventors and to the public a much more intelligent and uniform exposition of the law of patents and of the important questions which now of necessity must be determined so hastily.

CONCLUSION.

Thirty years ago there were but thirteen classes of inventions. To-day we have in this Office one hundred and seventy-seven distinct classes. In the year A. D. 1855, 4,435 applications for patents were received, while during the last calendar year this Office received 35,717 applications. The field of invention is widening so rapidly and the distinctions which are constantly required to be made have become so nice in many instances that the greatest care and skill are required to determine accurately what is new and what is old. Each year the history of invention becomes more elaborate and complicated, and no department of the Government more needs the services of men who are not only learned in the sciences, but who have become familiar by constant association month by month and year by year with the histories written and unwritten of invention and the arts. I take no risk in saying that the business as well as the importance of this Office are very little understood throughout the country generally. I feel entire confidence in saying that it needs but to be *understood* to be appreciated and cordially commended.
